

Fabric Images, Inc.

Bringing life
to your vision

CREATORS OF printed tensioned fabric architecture

By its very nature, fabric affords a freedom not offered by other construction methods. Fabric breaks the 'rules' of conventional practices, allowing you to explore new possibilities and make a progressive impression in a visual space. The flexible attributes of fabric integrate the playful natures of light and dark, and of form and function into a statement of strength and beauty.

Fabric in architecture allows you to capture and define space while evoking an emotional response from the participant. Textiles give you freedom to access the simplest of pleasures by allowing the space to interact with the architectural elements through the senses of sight and touch. The results make the most familiar and simplest of forms seem amazing.

About Us

Fabric Images is a dynamic global solutions provider of printed and non-printed tensioned fabric architecture. Our focus is on integrating structural frame and textiles into environments to enrich brand quality and the expressive identity of a space. With internal fabrication and highly skilled craftsmen, we are able to continuously push the limits of what fabric and alternative materials can do. Our flexible approach and belief that nothing is impossible lends itself to the innovation and dedication that we continuously provide. *As a manufacturer, we pride ourselves on being your innovative resource, your design advocate and your tensioned fabric solutions provider.*

Locations

As a worldwide producer of fabric architecture, we pride ourselves on paralleled production processes between all of our global manufacturing facilities in the U.S., Europe, South America, and Central America. This analogous network allows for quick responsiveness and the ability to replicate all of our solutions at any of our global manufacturing locations.

What makes the Difference

What sets Fabric Images apart is our spirit of exploration and enthusiasm for design and architecture. A constant quest for new textiles with intriguing surface qualities and the latest metal solutions keeps us pushing the limits of fabric architecture. As a design-forward manufacturer, we understand and deliver on the fine details and objectives required to produce fabric architecture and tensioned fabric solutions. Our hope is to afford you these resources and the encouragement to create a memorable experience that drives brand awareness experientially, tactically and connectively.

Offerings

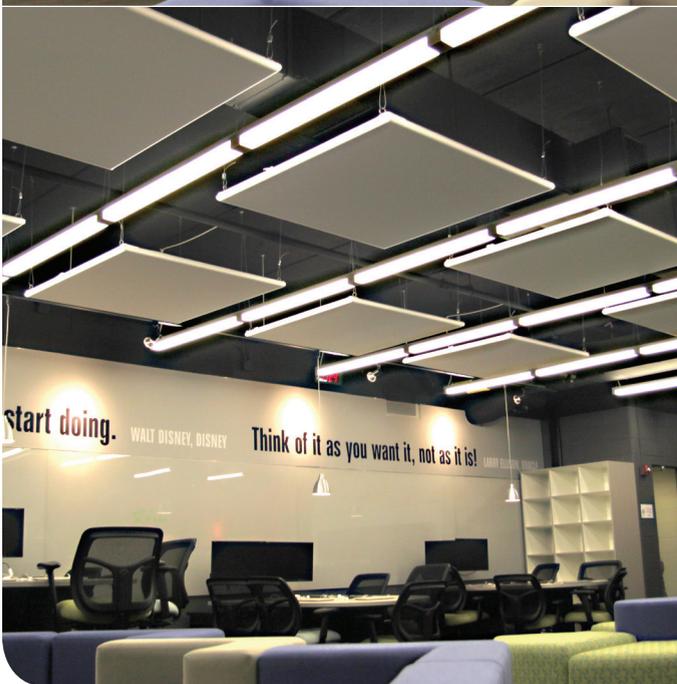

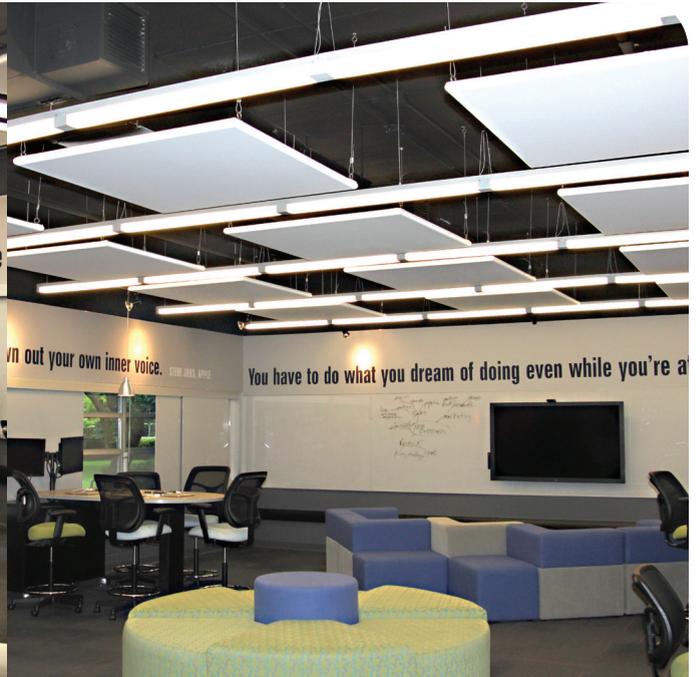

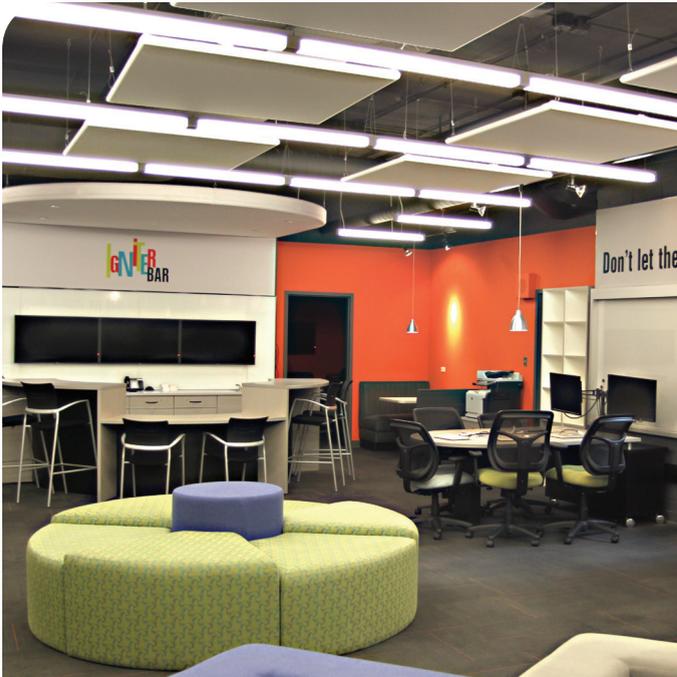

WHAT WE DO

Our 180,000+ square foot domestic facility is home to the ingenuity that has made Fabric Images an award winning manufacturer for 25 years. This one-stop-shop for fabric architectural solutions is home to SuperWide printing, a full-service metal fabrication shop, an automated and custom sewing operation, an extensive materials library, an eco-friendly powder coating line, design engineering, research and development and installation services.

Fabric Images is considered to be one of the industry's leading manufacturers of fabric designed architectural solutions and fabric displays.

In-house Capabilities

- Superwide 3m & 5m Printing
- Material Library & Resourcing
- Metal Fabrication
- Sewing & Finishing
- Powder Coating
- Groove® Display System
- Design Engineering
- Installation
- Prototyping

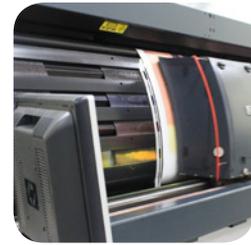

SuperWide

3m & 5m DYE SUBLIMATION

Fabric Images is the pioneer in 3m seamless dye sublimation printing. This cross-linked process reproduces a vibrant, vivid interpretation of your message or image. Fabric Images' SuperWide printer was the first of its kind. Since its birth, this printing process has revolutionized messaging architecture in the industries of events, exhibitions, retail, hospitality and museum experiences.

Designers can now create larger graphic opportunities infused with an intense color gamut without the need for seams. In the past this was a hurdle that the design community could not overcome. But because you needed it, we helped bring it to life.

BUILDING THE EXTRAORDINARY

Our metal solutions are versatile frame or display fixtures that can be custom-configured to your environment. They are ideally suited to define a space, suspend monitors, signage and lighting, or simply make a unique visual statement. Constructed using our unique connection sleeve, these fixtures are available in straight lengths, angled components, curved corners, and arches. Constructed from aluminum, a multitude of profiles are available. Our unique connector system makes installation and dismantling fast and simple without sacrificing strength or integrity.

Finishing

Every project reaches a critical juncture in the fabrication process when it comes to assembly and finishing. Without the proper experience and knowledge, even the finest of design details can look elementary. At Fabric Images, Inc., we are staffed with some of the finest finishers in the industry of fabric architecture. Our Dreamweavers ensure that the vision of the client's design meets the FI standards of quality and durability. Sewing a fabric skin to an aluminum structure is not as simple as sewing up a pair of pants. Our thorough process of "measure twice and cut once" allows our Dreamweavers to work quickly and accurately to deliver the final solution on time and fitted like a perfectly tailored suit.

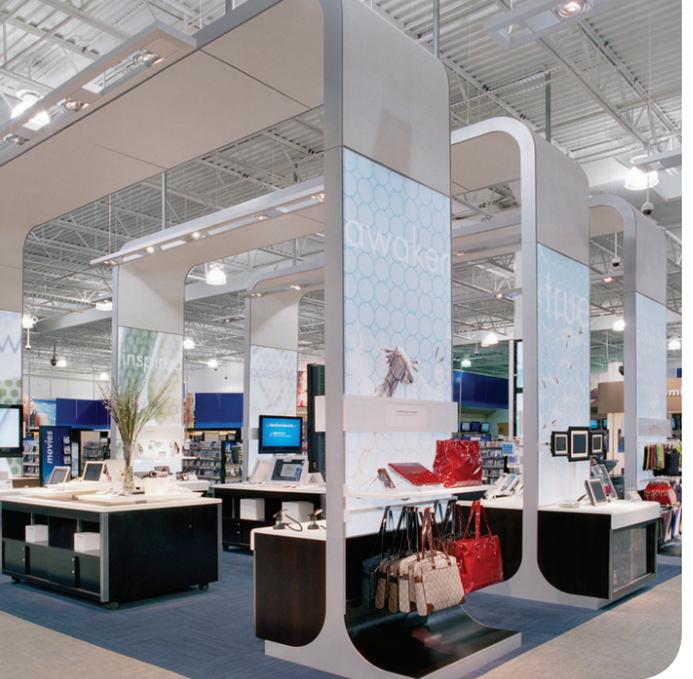

Groove[®]

ART INSTALLATION, WAYFINDING, DECORATIVE MESSAGING

The Groove[®] display system is a versatile messaging system that combines textiles with a silicone membrane and channeled extrusion to brand your space. The silicone membrane textile inserts into the frame extrusion around the perimeter to create a taut, wrinkle-free display with finished edges that fit smoothly into place. Because no tools are required to exchange the fabric panel, it is an ideal product that grants you the freedom to change your messaging as you change your mind or as your brand environment morphs with current way finding or graphic trends.

The Groove[®] display system is perfect for use in branded environments. This smart frame-and-lock system provides quick assembly, easy graphic change-outs, and reduces costs and damage. By splitting big formats into smaller profiles you can maximize your images and ability to update your look or marketing message.

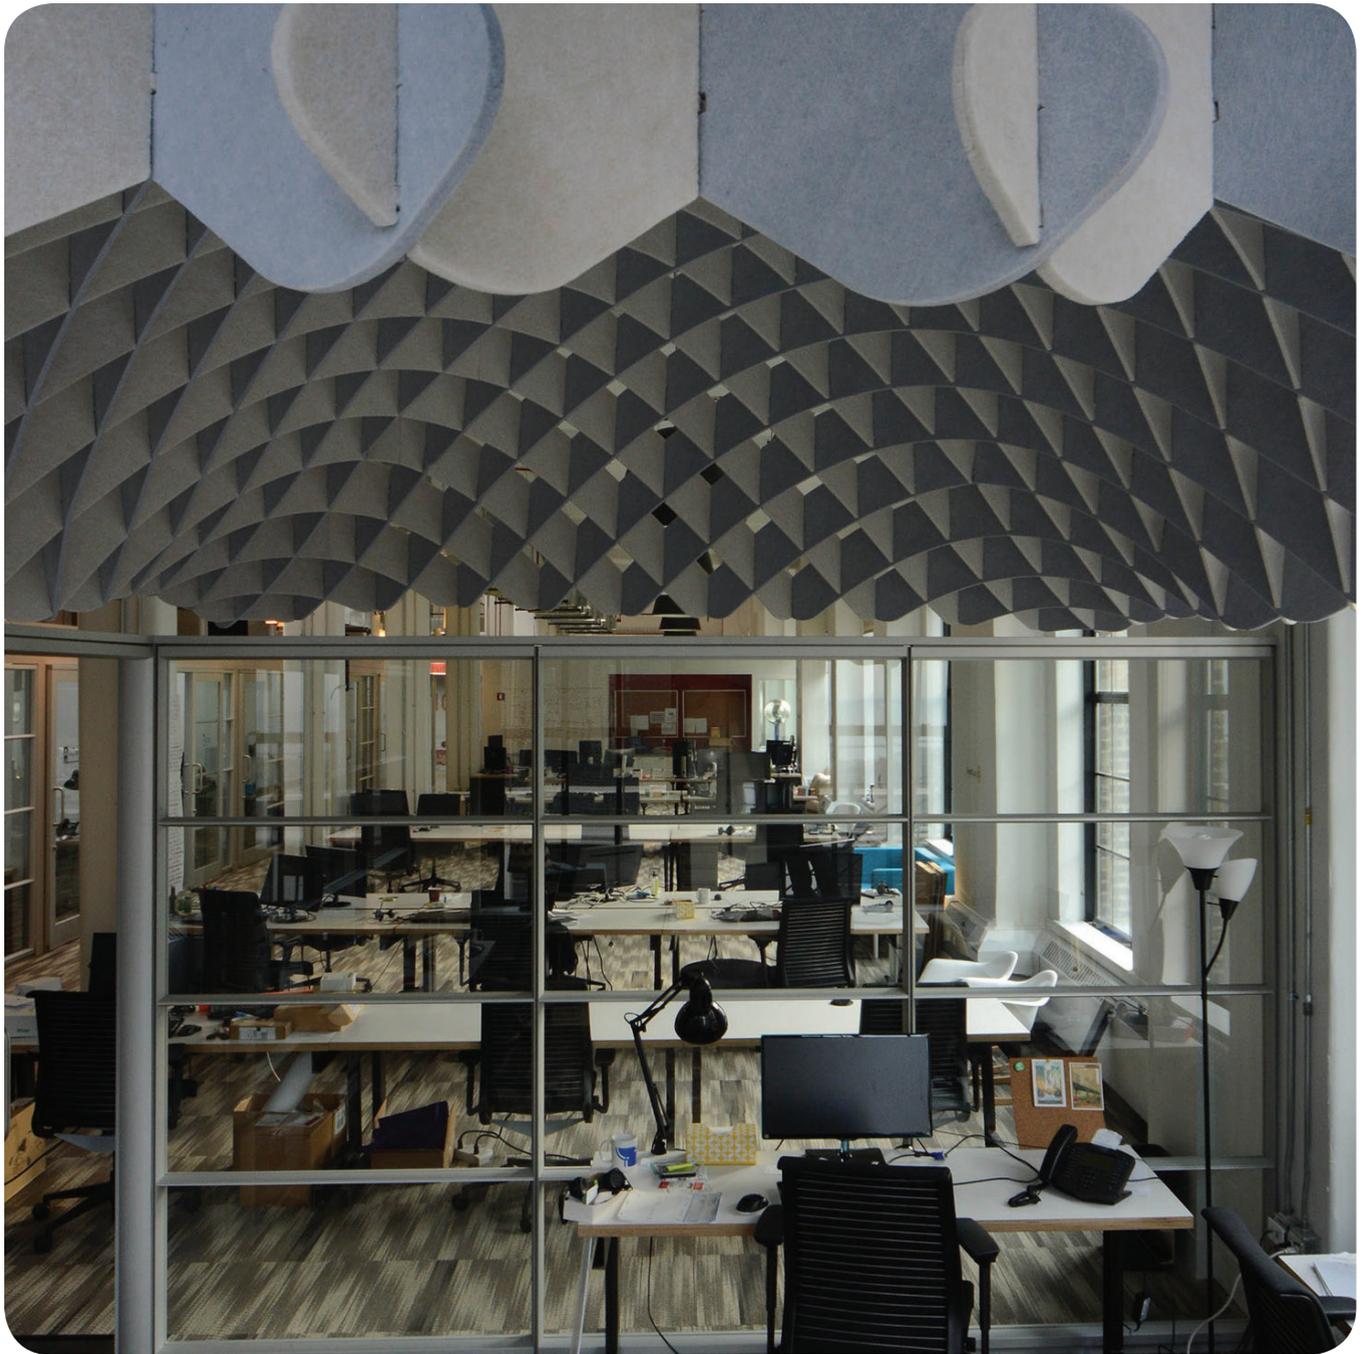

Hatch Acoustical

The Hatch Series of Acoustical Canopies is an elegant, easy to install canopy system that captures acoustical noise, allowing the open office layout to remain open. Created with class in mind, Hatch significantly upgrades any open interior. Customizing the design offers spatial depth and provides a highly individualized experience.

The material used to create the Hatch Series significantly reduces Reverberation Time (RT60) and improves speech clarity. Its acoustical attributes maximize speech privacy between work stations, bringing down the overall noise levels within an environment. In addition, the material has the added benefits of being flame-retardant and recyclable.

Engineering

Our expert staff offers more than expected from a fabrication standpoint. They can work in the virtual world to create real world solutions, utilizing 3D artists to translate vision into design, as well as structural engineers who transform design into reality. Metal and print experts can guide you through the more challenging design requests. Each structure creates its own unique set of issues and requires experts who can recognize those issues and create workable solutions.

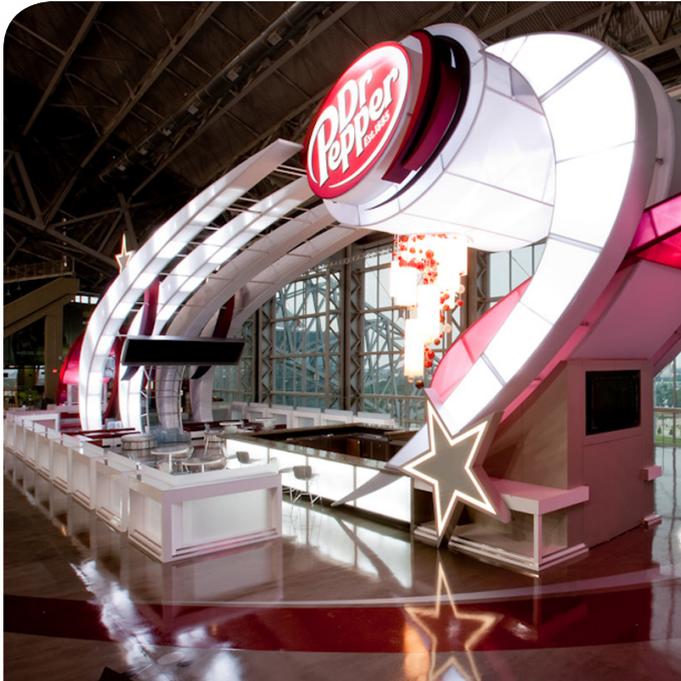

Installation

Fabric Images, Inc. uses in-house teams of specialized construction experts located at each manufacturing facility. These experts have fine-tuned their skills to meet the needs specific to the handling and installation of fabric architecture and its integration into permanent and temporary applications.

We also have built relationships with outside resources that specialize in the installation of the various custom and stock products supplied by Fabric Images, Inc.

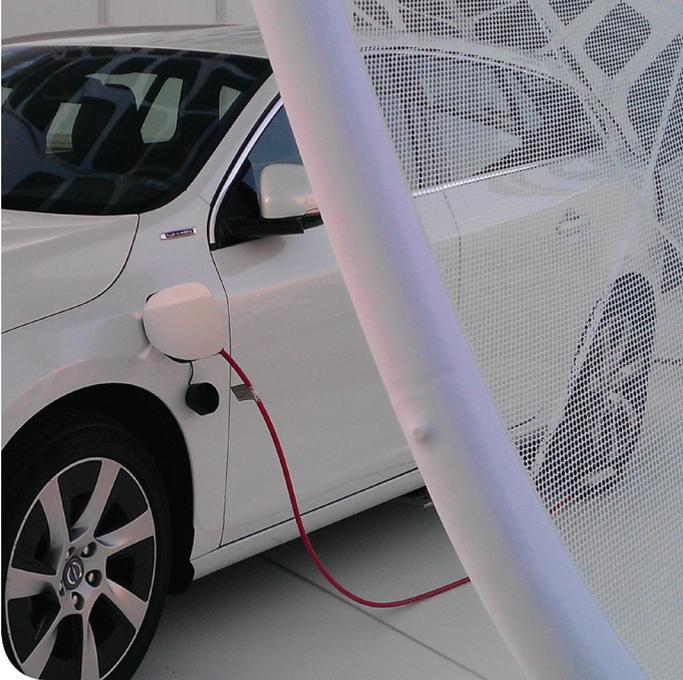

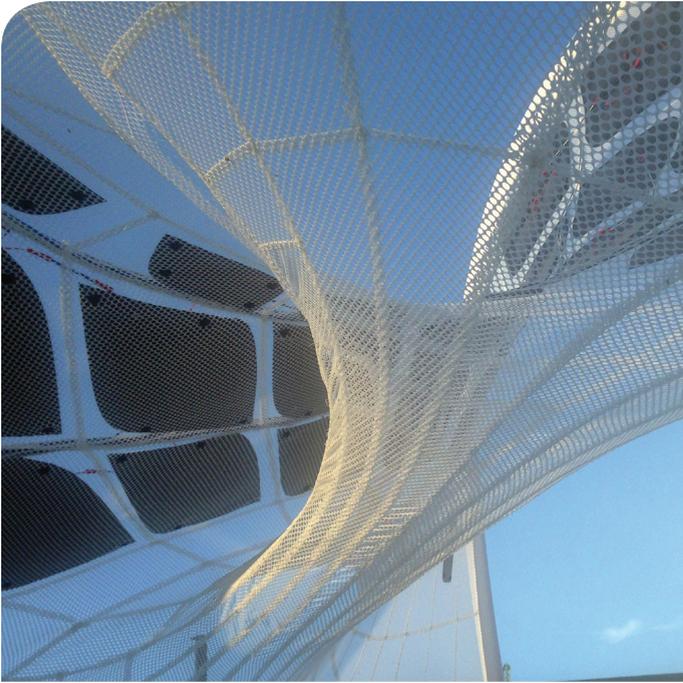

Material Research

The Fabric Images' in-house materials library contains an extensive sampling of materials, both printable and non-printable. Each unique material personality enables it to fit a variety of environments and solutions. It is up to you to push the limits of traditional fabric architecture. As your resource, our team is poised to aid you in meeting your design objectives through research and sourcing in order to exceed your standards for environmental branding.

At Fabric Images, Inc., we are constantly following and researching various markets to learn about trends in materials, technique and design. As we see these influences develop, we are able to interpret the findings back to fabric architecture and materials. This enables us to provide the inspiration back to you that will inspire and add excitement to your next design solution.
