

# VRVue Examiner™

HEADSET-FREE VIRTUAL REALITY

[exhibitry.com](http://exhibitry.com)

## VR Vue Examiner™

The VR Vue Examiner is a handheld wireless device that works like a magic camera for viewing virtual reality space. It allows customers to experience virtual reality in a new and easy way, without the need to wear a headset.

Simply point VR Vue Examiner at almost any product or object in the booth to see that object's virtual counterpart on a nearby video screen. As you move the Examiner, the virtual-world on the screen precisely syncs with the real-world. It's a unique augmented reality experience that helps customers engage with, understand and remember your products.

Customers can interact with the virtual world in a number of ways. For example, they can point to designated areas of the booth or parts of a product to pop-up infographics. Clicking a button might switch the display to x-ray mode, allowing them to see inside your product to better understand it's workings. This allows them to dig as deep as they like while learning about your product.

[exhibitry.com/VRVue](http://exhibitry.com/VRVue)

With VR Vue Examiner there are no headsets to wear and nothing to sanitize between uses. This makes it a practical and hygienic approach to leveraging the power of virtual reality in a trade show environment.

# Experience VR Vue

VR Vue is a turnkey virtual reality presentation system. It features a handheld device, computer system, the Examiner touchscreen monitor and a customized virtual reality experience.

The Examiner attaches to the monitor to further enhance the experience. Now the monitor becomes a magic camera. Customers use the handles to point the monitor in any direction to see the virtual view. They can interact with the virtual-world product using the touch screen to bring your virtual products to animated life. For example, they might have the product expand into an exploded parts view, with pieces floating all around the booth, so they can touch any part for more pop-up information. Or they might operate the virtual representation of the product to better understand how it functions.

VR Vue Examiner creates a unique virtual reality experience that helps you explain and demonstrate products.

Use VR Vue Experiences for

- product demonstrations
- self-service kiosk
- simulations
- lobby, museum or retail installation
- interactive presentation
- live presentations

## Your product has a story to tell.

We make multimedia experiences that tell those stories. From concept to completion, the artists, directors, animators and trade show technologists of exhibitry.com create communicative media that informs and motivates customers. We specialize in:

- Interactive kiosks and models
- Virtual reality
- Projection mapping
- Trade show apps
- Animation

Our products and services have proven effective for marketing and communication at trade shows, client events and marketing venues around the world. For more information, visit our website, or give us a call:
